Disclaimer / Source of Content

This book is based on the divine knowledge imparted by Bapuji, Dashrathbhai Patel Ji, who has been sharing this wisdom for over 30 years. The teachings presented here are not generated by artificial intelligence; they originate from Bapuji's own direct spiritual experiences and insights, which he has perceived through divine vision.

The content of this book has been carefully compiled from Bapuji's discourses and videos, reflecting his authentic spiritual teachings. While we have used AI tools solely for assistance in formatting, structuring, and refining the language for clarity and presentation, the knowledge itself remains purely and entirely that which has been given by Bapuji.

We respectfully present this work as a sincere effort to preserve and share his divine teachings in an accessible form.

About Bapuji

Bapuji — full name Bapuji Dashrathbhai Patel, and lovingly called Dadaji by the younger generation — was born in 1956 in the small village of Akhaj in the Mehsana district of Gujarat. He spent his childhood in the nearby village of Ambasan, also in the Mehsana district.

In the early part of his life, Bapuji was a highly successful lawyer. He later devoted himself entirely to realising the supreme spiritual truth and bringing that divine knowledge forward for the welfare of humanity. Today, his knowledge serves as a guiding light for sincere seekers on their path toward the ultimate truth.

Despite growing up in a poor family and facing difficult circumstances, Bapuji carried from childhood a deep desire to transform this suffering world into a better place. At the age of six, he questioned God repeatedly, asking why God remained silent in the face of human suffering. That intense longing eventually led him to attain the highest level of spirituality.

As a child, Bapuji would spend hours alone in the fields, often encountering subtle world entities on his way home. These experiences ignited in him a lifelong interest in the soul, the subtle world, and the unseen dimensions of existence.

In 1997, Bapuji established *Vishwa Parivartak Ishwariya Vidhyalay* in Chenpur, Ahmedabad, with the mission of transforming this mortal world into an eternal divine realm. Alongside him in this mission was Smt. Sushma Tandon, lovingly known as Maa.

Bapuji delivered continuous spiritual discourses for up to eighteen hours without rest, sharing knowledge received through deep meditation and divine vision in a superconscious state. His teachings cover the types of celestial creators across dimensions, the creation of the

solar system, the galaxy, the universe, and the transcendental knowledge of the multiverse.

At present, Bapuji remains immersed in deep meditation and *samadhi* for long hours each day, engaged in his transcendental mission in a superconscious state.

Preface

A Faithful Rendering

· ★ ·

Every morning, the Sun rises and fills the world with warmth and light. Most of us accept this quietly, without asking who made the Sun, why it was made, or how it has continued to shine for trillions of years without ever stopping.

This book contains the answers to these questions — as revealed by Bapuji Dashrathbhai Patel through his divine vision and superconscious knowledge. Bapuji explains the origin of the Sun, the supreme fire element at its core, its relationship with Lord Narayan, and the vast cosmic cycles of time within which the Sun exists.

This knowledge does not come from instruments or equations. It comes from direct inner experience — the same experience Bapuji has been sharing freely with seekers for decades. The pages that follow are a faithful rendering of that living wisdom, presented as simply and clearly as possible for every sincere reader.

Read these pages slowly, without hurry. Allow each teaching to settle quietly in your awareness.

· ★ ·

Gyan Daan Maha Daan

(Sharing Knowledge is the highest Charity)

Share to maximum extent with all.

— Bapuji Dashrathbhai Patel

Note on the Source Discourse

The teachings in this book are drawn from discourses delivered by Bapuji Dashrathbhai Patel and made available through his official YouTube channel. The original discourses were delivered in Hindi, and the knowledge presented here has been carefully transcribed and rendered into English without alteration, addition, or interpretation.

All content is presented in the spirit of *Gyan Daan* — the free sharing of knowledge — as is the tradition of Vishwa Parivartak Ishwariya Vidhyalay. Readers are warmly encouraged to listen to the original discourses to experience the complete depth of Bapuji's teachings in his own voice.

The video sources are listed at the end of this book.

Chapter I

Who Created the Sun?

The Sun we see every day is ancient beyond ordinary imagination. Yet very few have asked: who made it, and why?

According to Bapuji, the Sun was created by Lord Narayan — the combined divine form of Lakshmi and Narayan, known as Vishnu. In our universe, there are three great divine beings: *Brahma*, who creates; Vishnu, who sustains; and Shankar, who dissolves. It was Vishnu, as Narayan, who brought the Sun into existence.

Narayan took a single cell from within his own soul — a cell of *Param Agni*, the Supreme Fire Element — and placed it into the cosmos with a divine intention: to illuminate the Earth and sustain life upon it. From that moment, the fire of the Sun has never stopped burning.

This is why the Sun is called *Surya Narayan*. Because it is the creation of Narayan himself, it carries that divine name. It is not merely a star. It is a living divine being — a form born directly from the soul of Narayan.

♦ **Insight: “Narayan took a cell from his own soul — a cell of Param Agni — and from that single cell, the Sun was born.”**

— *Bapuji Dashrathbhai Patel*

The soul of Surya Narayan is made of cells of Param Agni. The Sun’s light does not originate from *Param Prakash*, the Supreme Light. It originates from Param Agni, the Supreme Fire. Fire creates light — and from that cell of Supreme Fire, light has been radiating outward for trillions upon trillions of years.

Chapter II

The Age of the Sun

The Sun that we see today is extraordinarily old. Bapuji explains its age through the cosmic time scale of Brahma.

Brahma's lifespan is measured in cosmic years. One year of Brahma equals 31 trillion, 104 billion years in human terms. Brahma's full lifespan is 100 cosmic years, which corresponds to approximately 311 trillion years on Earth.

At the start of Brahma's creation, for the first ten cosmic years, there was no need for the Sun. During this initial period, Brahma created seven supreme beings — the seven *Param Purushas* — who in turn created the seven cosmic realms. Gradually, these Param Purushas descended in consciousness, became deities, and eventually began taking human form. As they descended to Earth, the planet was covered in total darkness.

At that point, light became necessary. It was then that Lord Vishnu created Surya Narayan to illuminate the Earth.

This happened approximately forty cosmic years of Brahma ago. Since one cosmic year equals 31 trillion, 104 billion Earth years, the Sun is trillions upon trillions of years old. One complete *Parad* of Brahma — fifty cosmic years — has already been completed. We are now in the second Parad, with 1.98 billion years of it having passed.

The Sun has been burning continuously since its creation. Unlike the Earth, which is destroyed and recreated at the end of every *Kalpa*, the Sun does not change. It persists across multiple Kalpas and continues until the very end of Brahma's full lifespan.

◆ **Insight: “The Sun does not change. Just as the Earth is dissolved in every Kalpa, the Sun endures across all of them.”**

— Bapuji Dashrathbhai Patel

Chapter III

The Sun's Early Work — Light for the Earth

In the earliest phase of creation, when Surya Narayan was newly formed, there were no other planets. There was only the Earth. The Sun existed solely to provide light for this one planet.

Our ancient scriptures speak of Surya Narayan seated on a chariot drawn by seven horses, moving around the Earth in all directions. This was not symbolic language alone. Bapuji confirms that in the earliest cosmic age, the Sun literally revolved around the Earth, radiating its fire in all directions to keep the planet illuminated.

शास्त्रों में लिखा है — सूर्य नारायण देवता का सात घोड़े वाला एक रथ था और धरती के चारों ओर घूमते थे।

(The scriptures say — Surya Narayan had a chariot of seven horses and moved around the Earth in all directions.)

As time passed and the divine beings gradually descended in consciousness and took human form on Earth, the three elements of fire, air and ether slowly began to take shape. From *Param Agni* — the Supreme Fire — a subtle light began to emerge. This light gradually transformed from subtle to gross, and the Sun began radiating visible physical light.

As the Sun grew in intensity, and as more planets began to form over the cosmic ages, the Sun moved progressively further from the Earth. This was not an accident. It was a natural process of adjustment — the Sun moved to the right distance so that life on Earth would not be burned away by excess heat.

The distance between the Sun and the Earth that we observe today took billions of years to establish, and it was

determined entirely by what was needed to sustain human and planetary life.

Chapter IV

From Supreme Fire to Gross Light

The Sun did not always burn in the way it burns today. Its fire has evolved across trillions of years through a process Bapuji describes with great clarity.

In the beginning, the Sun radiated *Param Agni* — the pure Supreme Fire. This was a subtle, primordial fire, very different from the physical fire we know. From this Supreme Fire, a subtle light emerged and spread across the Earth.

Gradually, as the three gross elements — fire, air, and ether — began to take form in the cosmos, the nature of the Sun's fire changed. The subtle *Param Agni* began converting into gross fire. The fire of the Sun began pulling air and ether from space, burning them, and converting them into additional fire. This process made the Sun grow larger and larger over immense spans of time.

What science today calls the burning of hydrogen — in which hydrogen is converted into helium — is part of this broader process. The air element, when it comes into contact with the Sun's fire, is burned and transformed into more fire. The Sun's gravitational pull draws the air element from space, and this fuel adds to the Sun's own fire.

As the Sun grew and its gravitational power increased, the planets that had been forming nearby began to orbit it. Some planets that came too close were pulled in and burned. Others — such as Neptune, Pluto, and Uranus — moved progressively further out, away from the Sun's intensifying heat, in order to survive.

In the first *Parad* of Brahma, there were many more planets than exist today. Countless planets were created and destroyed across the cosmic ages. The nine planets we are familiar with today are what remain after trillions of years of cosmic change.

◆ **Insight: “The Sun grows larger by pulling air from space, burning it, and converting it into fire. It has been doing this for trillions of years.”**

— *Bapuji Dashrathbhai Patel*

Chapter V

Sunspots — The Marks of the Ancient Scriptures

· ★ ·

Modern science observes dark spots on the surface of the Sun and calls them sunspots. The ancient Indian scriptures call them *Surya Kalank* — the marks of the Sun.

Bapuji explains the nature of these spots in a way that goes beyond scientific observation. Fire does not burn uniformly across the entire surface of the Sun. There are certain regions where the fire element does not reach. In those regions, a vacuum exists — an absence of fire. Surrounded on all sides by blazing fire, these areas of vacuum appear as dark spots.

शास्त्रों के हिसाब से सूर्य कलंक निकलते हैं।

(According to the scriptures, *Surya Kalank* — sunspots — appear on the Sun.)

When solar flares erupt from these regions, powerful energies are released outward into space. These energies affect the planets they reach, including the Earth. Communication systems can fail, electricity can be disrupted, and the balance of energies on the planet is disturbed. This is not new knowledge. The scriptures acknowledged these effects long ago.

Bapuji also notes another dimension of these dark regions. In the ancient ages, deities from other realms would travel to the Sun. Surya Narayan has an entire divine dynasty — Karna, the great warrior of the *Mahabharata*, was his son. Yamuna and Yamadev are also among his divine descendants. When divine beings entered the Sun, fire surged outward from the point of their entry and flowed out toward the planets.

Chapter VI

Dark Energy, Black Holes, and Supreme Light

Science speaks of dark energy and dark matter as invisible forces that govern the universe. Instruments cannot detect them directly — they are perceived only through their effects. To science, they appear dark.

Bapuji explains why: dark energy is not the absence of light. It is *Param Prakash* — the Supreme Light — which operates at a frequency so far beyond the five gross elements that no physical instrument can capture it. Because our cameras and instruments are made of the five elements, they cannot register this supreme light. It appears dark to them.

वो डार्क एनर्जी क्या है? वही परम लाइट परम प्रकाश है।

(What is dark energy? It is Param Prakash — the Supreme Light itself.)

The same principle applies to what science calls black holes. In the centre of each galaxy, there is what Bapuji calls *Maha Paramdham* — a great concentration of supreme light and supreme power, operating at eight to twelve Kala (soul power of that respective creator of universe) in intensity. This *Maha Paramdham* appears black to physical instruments because its light is beyond the frequency range of all gross tools. Science, unable to understand what it is, calls it a supermassive black hole.

A black hole is not a destructive void. It is a reservoir of *Param Prakash* and *Param Tattva* — Supreme Light and the Supreme Element. It is a place where gross creation dissolves back into its subtle origins.

♦ **Insight: “What science calls a black hole is, in reality, *Maha Paramdham* — a vast concentration of supreme light beyond the reach of all instruments.”**

Surya Narayan · Bapuji Dashrathbhai Patel
— *Bapuji Dashrathbhai Patel*

Chapter VII

Extraterrestrial Beings and the Sun

Bapuji reveals that the Sun is observed closely by extraterrestrial beings — advanced souls who travel from distant galaxies, universes, and great universes to witness what is happening at this extraordinary time in the multiverse.

These beings travel in large crafts — what we call UFOs — which are not made of the five gross elements. They are made of *Param Prakash*, the Supreme Light. Because they are composed of supreme light, they appear dark on physical cameras and instruments. They show up as dark spots or dark areas near the Sun.

When these crafts enter the Sun to observe its interior, they create a displacement. The fire of the Sun surges outward at the point of their entry. This surge of fire flows out into space and can affect the planets in its path. What science records as solar winds and coronal mass ejections includes, in part, this effect.

Why do these beings travel from such vast distances to observe our Sun? Because this is a special time. We are in *Kali Yuga* — but more than that, the entire multiverse is preparing for a great transformation. Beings from galaxies, universes, and great universes beyond our own are watching and studying what is unfolding.

पूरा मल्टीवर्स परिवर्तन होने वाला है। इसलिए सूर्य भी परम शांति में स्थित है।

(The entire multiverse is about to transform. Therefore the Sun too rests in Param Shanti — Supreme Peace.)

Chapter VIII

The Cosmic Timeline of Brahma

To understand the age of the Sun and the state of the universe, we must understand Brahma's cosmic timeline as explained by Bapuji.

Brahma's full lifespan is 100 cosmic years, equal to approximately 311 trillion Earth years.

One Day of Brahma

One day of Brahma equals 14 Manvantaras. One Manvantara equals 71 Yugantars. One Yugantar is one cycle of four Yugas: Sat Yuga, Treta Yuga, Dwapar Yuga, and Kali Yuga.

One day of Brahma therefore contains 1,000 cycles of four Yugas. In Earth years, one day of Brahma equals 4.32 billion years, and the night of Brahma is equal in length — making one full day and night 8.64 billion Earth years.

One Year of Brahma

One year of Brahma equals 31 trillion, 104 billion Earth years.

Brahma's Full Lifespan

One hundred cosmic years equals approximately 311 trillion Earth years. Brahma's lifespan is divided into two halves — two *Parads* of fifty cosmic years each.

Where Are We Now?

We are at the beginning of the second Parad of Brahma. The first Parad — the first fifty cosmic years — has been completed. Fifty cosmic years multiplied by one cosmic year (31 trillion, 104 billion Earth years) means that 1,055 *Kharab* years have already elapsed. Equally, 1,055 *Kharab* years still remain.

Of the second Parad, only 1.98 billion years have passed. We are in Brahma's second Parad, first day, seventh Manvantara, twenty-eighth Yugantar, Kali Yuga. The Sun will endure until the very end of Brahma's hundred cosmic years.

♦ **Insight: “1,055 Kharab years have passed. And 1,055 Kharab years still remain. The Sun has much life ahead of it.”**

— *Bapuji Dashrathbhai Patel*

Chapter IX

Dissolution and the Final Fire

The Sun is not destroyed at the end of each *Kalpa*. The Earth and the three worlds are dissolved — but the Sun endures. However, at the very end of Brahma's full lifespan, a great dissolution takes place.

At that time, *Nirguna Nirakar Brahma* — the formless, attribute-less, supreme cosmic power, also called Nirakar Shiv by some — whose power has gradually diminished, enters the Sun. Within the Sun, it generates Kal Agni, the fire of cosmic time. This fire burns the entire universe, the three worlds, and everything within them, reducing all of creation to ashes.

At this point, even the Sun itself becomes what science would call a black hole. Its gross fire is extinguished and replaced by Param Agni — the Supreme Fire. And Param Agni is dark energy to any physical instrument.

Then begins a gradual process of transformation. The gross universe dissolves first into fire, then into Param Agni. From Param Agni, the residue enters *Param Akash*, the Supreme Ether. From Param Akash, it moves into Param Mahattva, the Supreme Principle. And from there, everything is absorbed into Param Prakash — the Supreme Light.

In this way, gross creation returns step by step to its subtle origins. And this same process of creation and dissolution is happening simultaneously, endlessly, across countless universes.

इसी तरह अनंत कोटि ब्रह्मांडों का जो सजन विसर्जन होता रहता है।

(In this way, the creation and dissolution of countless universes continues endlessly.)

Chapter X

The Multiverse and Infinite Suns

Our universe — our *Brahmaand* — contains one Sun. This is a fundamental principle in Bapuji's teachings. There is one Sun per universe, and that Sun is the centre around which an entire solar system and all planetary life revolves.

When we look at the sky at night and see the stars, every single star we see is a Sun. And each Sun corresponds to its own universe. As many stars as exist in the cosmos, so many universes exist.

रात को जो सितारे देखते हैं, वो सब सूर्य है। तो जितने सितारे हैं, इतने ब्रह्मांड हैं।

(*The stars you see at night — they are all Suns. As many stars as there are, so many universes there are.*)

In every universe — every *Param Maha Brahmaand* — there are countless Suns and countless galaxies. Every universe holds its own vast number of galaxies, each with its own Sun, its own solar system, and its own creation.

This knowledge of the multiverse is vast, and Bapuji has shared it across many discourses. When one understands the structure of the multiverse — from the individual *Brahmaand* to the Maha Brahmaand, from the Maha Brahmaand to Param Maha Brahmaand (the Great Universe) and beyond — the unity underlying all creation becomes clear.

This is *Brahma Gyan*, *Atma Gyan* — knowledge of the soul and the cosmos. As consciousness deepens, the boundaries between the individual soul and the infinite cosmos dissolve. The entire creation is seen as one vast family of light, fire, and consciousness in continuous motion.

♦ **Insight: “As many stars as exist in the sky, so many universes exist. Each star is a Sun, and each Sun holds its own creation.”**

Bapuji Insights

· ★ ·

A consolidated thread of supreme truths from the chapters that precede.

♦ **Insight:** “Narayan took a cell of Param Agni from his own soul, and from that single cell the Sun was born and has been burning ever since.”

— *Bapuji Dashrathbhai Patel*

♦ **Insight:** “The soul of Surya Narayan is made of cells of Param Agni — not of Param Prakash, but of Param Agni.”

— *Bapuji Dashrathbhai Patel*

♦ **Insight:** “The Sun does not change. Just as the Earth is dissolved in every Kalpa, the Sun endures across all of them.”

— *Bapuji Dashrathbhai Patel*

♦ **Insight:** “Dark energy is not the absence of light. It is Param Prakash — the Supreme Light — which cannot be captured by any gross instrument.”

— *Bapuji Dashrathbhai Patel*

♦ **Insight:** “What science calls a supermassive black hole is, in reality, Maha Paramdham — a vast reservoir of Supreme Light and supreme power.”

— *Bapuji Dashrathbhai Patel*

♦ **Insight:** “The entire multiverse is about to change. And therefore the Sun abides in — Param Shanti.”

— *Bapuji Dashrathbhai Patel*

♦ **Insight: “1,055 Kharab years have passed since the first Parad of Brahma. And 1,055 Kharab years still remain.”**

— *Bapuji Dashrathbhai Patel*

♦ **Insight: “As many stars as you see in the sky at night — so many universes exist. Every star is a Sun.”**

— *Bapuji Dashrathbhai Patel*

Glossary

Agni Tattva — The fire element; one of the five gross elements of creation.

Atma — The soul; a point of conscious energy residing in the body.

Atma Gyan — Knowledge of the soul; self-knowledge leading to cosmic understanding.

Behad — Beyond limits; the transcendental realm beyond ordinary creation.

Brahma — The divine creator of the universe; his lifespan defines the cosmic timeline.

Brahma Gyan — Supreme knowledge of the cosmos and all its dimensions.

Brahmaand — The universe; one complete cosmos containing one Sun, one Earth, and all its realms.

Had — The realm within limits; bounded creation, as opposed to Behad.

Kala — A unit measuring divine potency; higher Kala denotes greater cosmic power.

Kal Agni — The fire of time; the supreme fire that dissolves the universe at the end of Brahma's lifespan.

Kalpa — A cosmic day of Brahma; one complete cycle of creation and dissolution, equal to 4.32 billion Earth years.

Kalpa Pralaya — The dissolution of the three worlds at the end of a Kalpa.

Kali Yuga — The fourth and final age in a cycle of four Yugas; the present age.

Maha Brahmaand — A great universe or galaxy; a vast structure containing countless Brahmaands.

Maha Paramdham — The supreme abode at the centre of a galaxy; a vast concentration of Param Prakash.

Manvantara — A cosmic time unit; one day of Brahma contains fourteen Manvantaras.

Multiverse — The totality of all universes, galaxies, and great universes in existence.

Narayan — The divine sustainer; another name for Vishnu; creator of Surya Narayan.

Nirguna Nirakar Brahma — The attribute-less, formless supreme cosmic power; also called Nirakar Shiv.

Param Agni — The Supreme Fire Element; the primordial fire from which the Sun was created.

Param Akash — The Supreme Ether; a subtle dimension beyond the gross ether element.

Param Prakash — The Supreme Light; a divine light beyond the frequency of any gross instrument.

Param Purusha — One of the seven supreme beings created by Brahma at the beginning of creation.

Param Shanti — Supreme Peace; the state of ultimate stillness and transcendence.

Param Tattva — The Supreme Element; the subtlest foundation of all creation.

Paramdham — The supreme abode; the highest divine realm beyond the created universe.

Parad — Half of Brahma's lifespan; fifty cosmic years, equal to approximately 1,055 Kharab Earth years.

Pralaya — Dissolution; the cosmic process in which creation returns to its source.

Samadhi — A state of superconscious absorption; deep meditative union with the divine.

Shankar — The divine dissolver; one of the three great cosmic beings (Tridev) of the universe.

Surya Kalank — Sunspots; the dark marks on the surface of the Sun described in the ancient scriptures.

Surya Narayan — The divine being of the Sun; created by Narayan from a cell of Param Agni.

Tridev — The three great divine beings: Brahma (creator), Vishnu (sustainer), and Shankar (dissolver).

Vishnu — The divine sustainer of the universe; same as Narayan; creator of Surya Narayan.

Yog — Spiritual practice leading to union with the divine and self-realisation.

Yugantar — One complete cycle of four Yugas; one Manvantara contains 71 Yugantars.
