ABOUT BAPUJI

Bapuji Dashrathbhai Patel

Bapuji (full name: Bapuji Dashrathbhai Patel, also lovingly called “Dadaji” by the younger generation) was born in 1956 in the small village of Akhaj in the Mehsana district of Gujarat. However, he spent his childhood in another village named Ambasan, also located in the Mehsana district.

In the early part of his life, he was a highly successful lawyer. Later, he devoted his life to realizing the supreme spiritual truth and bringing this divine knowledge forward for the welfare of humanity. Today, this supreme knowledge serves as a guiding light for true seekers to realize their ultimate destiny. It is a blessing of the highest divinity that the present time is witnessing the rise of this supreme spiritual knowledge, guiding souls on Earth to return to their original source.

Despite being raised in a very poor family and facing challenging circumstances, Bapuji had a deep desire to transform this sorrowful and suffering world into a better place. At the young age of six, he questioned God repeatedly, asking why God remained silent about the suffering of humanity. This intense longing to end human suffering eventually led him to attain the highest level of spirituality later in life.

Even as a child, Bapuji would spend hours alone in the fields, often neglecting his own comfort. Due to poverty, he would walk barefoot without shoes or sandals, frequently getting pricked by thorns. Many times, he would stay late in the fields and, on his way back home, encounter subtle world entities. These experiences sparked his interest in communicating with subtle world souls.

Bapuji was courageous from a young age, which helped him overcome many obstacles. Alongside his studies in chartered accountancy (CA), he gave tuition classes to support himself financially. Later, he completed his Bachelor of Law (LLB) degree and became a well-known lawyer in Ahmedabad.

In 1997, he established a spiritual institution called “Vishwa Parivartak Ishwariya Vidhyalay” in Chenpur, Ahmedabad, with the mission of transforming this mortal world, filled with suffering and disorder, into an eternal divine world of immortality. Smt. Sushma Tandon, lovingly known as “Maa,” worked alongside Bapuji in this grand divine mission.

To accomplish this mission, Bapuji worked tirelessly, dedicating all his resources to this divine purpose. During that time, he would deliver continuous spiritual discourses for up to 18 hours without rest. In these discourses, he explained the highest dimensions of divine knowledge, which he realized through deep meditation and divine vision in a state of superconsciousness. This knowledge goes beyond the imagination of the ordinary human mind.

Bapuji’s teachings cover a vast range of topics, including the types of celestial creators across different dimensions, the creation of our solar system, galaxy, and universe, and most importantly, the transcendental knowledge of the multiverse and realities beyond it. His knowledge is supremely profound and is intended for highly evolved seekers, referred to as “behad souls.” According to Bapuji, these “behad souls” will play a key role in transforming this mortal world into an eternal divine realm.

At present, Bapuji remains deeply engaged in intense meditation and samadhi for long hours. He does not meet anyone, as he is continuously immersed in his transcendental mission in a superconscious state.

PREFACE

“Gyaan Daan Mahadaan”

(Sharing knowledge is the highest charity)

— **Bapuji Dashrathbhai Patel**

This e-book, “Life in Andromeda: Cosmic Truths”, does not merely inform the reader about the distances and structures of galaxies, but introduces them to the profound mysteries of existence, the soul, creation, and consciousness — truths that Bapuji has witnessed and experienced through his divine vision.

This work presents, in simple spiritual language, subjects such as the cosmos, the solar system, galaxy clusters, Paramdham, the subtle and causal worlds, Maya (illusion), the law of karma, and the cosmic journey of souls.

This book reveals that just as life on Earth is governed by laws, so too are the subtlest and most divine laws of creation, balance, and governance active throughout the entire cosmos. Life in vast galaxies like Andromeda, the composition of different elements, the power (Kala) of souls, and the differing arrangement of time and ages — all of this together signals that creation is not merely a physical structure, but an ever-continuing divine play of conscious being.

This e-book is for all curious readers who wish to go beyond the outer form of life and understand who we are, how creation operates, how karma becomes bondage, and what the true potential of the soul is. It is our hope that this work will awaken within you a new vision for perceiving the cosmos, a new understanding, and an inspiration for spiritual exploration.

CHAPTER I

Life in Andromeda

· ★ ·

Cosmic Truths

According to Bapuji, the Andromeda Galaxy is approximately 3 to 3.5 million light-years away from our Milky Way Galaxy.

Scientists state that the Andromeda Galaxy is approximately 2.5 million light-years away from the Milky Way Galaxy. However, Bapuji has seen through his divine vision that Andromeda is more than 3 million light-years away from our Milky Way.

The diameter of the Andromeda Galaxy is approximately 1.46 lakh (146,000) light-years, and Andromeda is a very ancient (primordial) galaxy. It is part of a galaxy cluster — that is, a group of 172 galaxies, which is called a cluster. Among those 172 galaxies, the Andromeda Galaxy is nearly the largest.

Our Milky Way Galaxy is also spread over more than 1 lakh (100,000) light-years. Just as our galaxy has approximately 800 billion suns — meaning 800 billion solar systems, since each solar system has only one sun — the Andromeda Galaxy contains approximately 3,000 billion (3 trillion) solar systems.

Scientists also state that some solar systems have two suns, but according to Bapuji, in reality a solar system does not have two suns. There is only one original sun; what appears as the second is merely its reflection. It looks like a sun, but is not actually a sun.

The Andromeda Galaxy is described in our ancient Sanatan scriptures. Bapuji explains that just as moons orbit planets in a solar system and all planets revolve around the sun, similarly all galaxies also revolve, with their Creator at the centre.

Our cluster of 172 galaxies has a Creator who possesses 13 Kala (units of divine power). The Creator of the Andromeda Galaxy possesses 12 Kala, the Creator of our Universe possesses 20 Kala, and the Creator of our Milky Way Galaxy possesses 10 Kala.

Bapuji explains that generally a galaxy is of 8 to 12 Kala, and the Creator of a galaxy possesses 1–2 Kala of additional power. This means the Creator uses a percentage of his own power to create the universe.

Just as our galaxy has a supermassive black hole, so too does Andromeda have a supermassive black hole. That supermassive black hole is Paramdham, where the Creator of that galaxy — whom we may call the Maha Bramha — resides.

Just as there is one cosmos (one solar system) whose Creator is called Brahm, similarly there are infinite cosmoses. The Creator of the great cosmos — meaning the galaxy — is called Maha Bramha. He is formless and attributeless, he is the Supreme Light, he contains power within him, and with a single resolve (sankalp) of Maha Bramha, countless formless Shivas come into being.

The Andromeda Galaxy contains approximately 3,000 billion cosmoses — meaning 3,000 billion solar systems — and within the Andromeda Galaxy there are approximately an equal number, around 3,000 billion, black holes.

The Impressions of Creation and the Similarity of Galaxies

Bapuji explains that the Creators of most galaxies are Maha Bramhas, who are in the form of formless Supreme Light. Even over the formless there are coverings, and within those coverings there are recordings. Above the Supreme Light there is the Mahatatva (universal recording power), and within it are recordings. These recordings come from its Creator.

If the Creator of the Universe is Param Maha Shiv, and his creations are many Maha Shivs, then when Param Maha Shiv makes a single resolve — “Let me become many from one” — his power divides into many parts. These parts become Maha Shivs or Maha Bramhas. The impressions and recordings in Param Maha Shiv are the same recordings that come into his creation. The process of creation is nearly the same in all galaxies.

Galaxy Clusters and Their Creators

Bapuji, through his divine vision, explains that just as we have a cluster of 172 galaxies, there are trillions of such clusters. In some clusters of other galaxies there are 100 galaxies, in some 150, 200, or even 250. All these clusters orbit the central point (Centre Point) of the Universe.

According to scientists, galaxy clusters are among the largest structural groups. They are collections of many galaxies bound together by gravity.

- A single galaxy cluster can contain hundreds to thousands of galaxies.
- Gas and dark matter are present between them, which keeps the entire cluster stable.
- Scientists study these to understand the evolution of the cosmos and cosmic structure.
- Large galaxy clusters sometimes merge to form superclusters, which are part of the vast network of the universe.

According to Bapuji:

- Every galaxy cluster has a Creator who creates it — the Param Maha Shiv — who builds and governs that galaxy cluster.
- While science considers gravity and dark matter to stabilize clusters, Bapuji explains that this is the energy of Param Maha Shiv, which science calls gravity, dark matter, or dark energy. It is the subtle

conscious energy of Param Maha Shiv, which cannot be seen by gross scientific instruments.

- In larger clusters, the amount of energy and discipline within the galaxies also differs — as in Andromeda, where highly powerful souls operate under their own special laws of a higher dimension.

Cosmic Diversity

All 3,000 billion solar systems of the Andromeda Galaxy contain life. Every solar system has life. The cosmos (i.e., a solar system) is the place where the formless, subtle-form, and physical worlds exist. Infinite such cosmoses exist within one galaxy, and infinite galaxies exist within one universe. One solar system equals one cosmos — there are 3,000 billion such solar systems in the Andromeda Galaxy. These include large and small cosmoses, cosmoses of different types, and every cosmos has planets similar to Earth.

CHAPTER II

The Gross, Subtle, Causal World and Paramdham in Andromeda

The Gross World (Physical World / Mrityu Lok)

According to Bapuji, in the Andromeda Galaxy, just as in our galaxy, the Mrityu Lok (world of death / gross realm) exists. In the cosmoses of Andromeda, humans also exist on planets similar to Earth. In the trillions of cosmoses there, beings composed of 5, 6, 7, 8, 9, or 10 elements are created. Their lifespan is determined according to the norms of that cosmos.

The ether element, air element, and fire element there are entirely different from those in our galaxy, and exist in many varieties.

The Subtle World and the Causal World

Bapuji explains that just as in our cosmos there are realms (lokas) above and below the earthly plane, similarly in the cosmoses of Andromeda there are also various realms above and below. In some solar systems or cosmoses, there are more subtle realms above, and in some fewer. The arrangement of creation is somewhat similar.

In these realms, the level of “Supreme Light” (Param Light) differs, depending on the Kala (units of divine power) of the Creator (Shiv) of that cosmos — such as 2 Kala, 3 Kala, or 4 Kala of Supreme Light.

There too, there are nether realms (Patal Lok — such as Atal, Vital, Satal). These arise when souls descend and become covered by the five elements.

Paramdham and the Formless World

In every cosmos there is a Paramdham, where the Creator of that cosmos resides. At the centre of the galaxy, the Creator

(Maha Shiv) sits in the “Maha Paramdham” holding such immense power of Supreme Light that he controls the revolution and balance of the entire galaxy. In Paramdham there resides a formless group that possesses vast technology and knowledge for creating cosmoses.

CHAPTER III

Different Combinations of Elements in All Galaxies

In the process of cosmic creation based on elements, the formation of a galaxy is an extremely scientific and spiritual event. When a Maha Shiv resolves to create a galaxy, he first creates a vast spherical football-like shape or “globe.” Within this protected globe, the divine play of all cosmoses, solar systems, and elements begins. Each galaxy has its own separate globe, within which its Creator completes the process of creation.

Our Milky Way Galaxy is primarily based on the combination of five elements (ether, air, fire, water, earth), but in the Andromeda Galaxy, this formula of elements and their combination is entirely different and more advanced. Bapuji explains that every galaxy has its own distinct “ether element” (Akash Tatva). In Andromeda there is a “Super Ether Element,” and infinite varieties of elements exist there. Due to the countless combinations of fire and air elements, the environment and form of life there is beyond our imagination.

Within the globe of this vast galaxy, approximately 3,000 billion (3 trillion) solar systems or cosmoses are contained. Each of these solar systems is an independent cosmos, within which exist their own Mrityu Lok and higher realms.

The level of life in Andromeda is determined by the number of elements. While humans on Earth are composed of only five elements, in the various cosmoses of Andromeda there exist human beings with bodies composed of 6, 8, or even 10 elements. Not only humans, but the creatures there are also extraordinary; Bapuji has seen lion-like animals there that have wings.

The centre of this infinite creation is the “Maha Paramdham” located at the heart of the galaxy, where its

Creator (Maha Shiv) resides with tremendous energy. Through his power he completely controls the rotational speed of these trillions of solar systems and their mutual balance. Ultimately, the creation and dissolution of trillions of cosmoses is the divine nature (swabhav) of that formless being, and it is merely a single resolve — by taking on the form of Mahakal, he can in one instant absorb his entire creation back into every pore of his being.

CHAPTER IV

The Role of the Trinity: Brahma, Vishnu, Shankar

In all cosmoses of Andromeda, Brahma, Vishnu, and Shankar are not present. In many cosmoses and their solar systems, the trinity (Brahma, Vishnu, Shankar) does not exist. The Creator of Andromeda is Maha Shiv. Maha Shiv made a single resolve and infinite Shivas came into being. Then, just as Maha Shiv became embodied from the formless, so too all Shivas became embodied from the formless.

Later, many Shivas created their cosmoses directly. In many cosmoses, creation happened through Brahma; in many cosmoses, creation occurs directly through Vishnu. Vishnu generates many Brahmas, and many Brahmas create their own small cosmoses. The Vishnu who creates all these Brahmas is one, and the ones who create Vishnu are Sada Shiv and Sada Shakti.

Just as in our cosmos there are 14 realms, and above them are Brahmapuri, Vishnupuri, and Shivpuri, similarly there too it is approximately the same, but not exactly the same. There is a difference in elements. The combination of elements differs everywhere. The method of running cosmoses (solar systems) is nearly the same in all galaxies.

In the cosmoses of Andromeda, each Shiv has his own unique Kala and power. In cosmoses where creation happened directly through Vishnu or Brahma, the speed of creation and level of energy differs. The elements and system of creation in each cosmos operate according to the capacity and Kala of that Shiv. Therefore, even though the structure may appear similar, subtle differences and uniqueness remain in each cosmos. This is why the cosmoses of Andromeda are extremely disciplined and of high energy.

CHAPTER V

The Mystery of the Ages (Yugas)

Just as in a cosmos of our Milky Way Galaxy — the one we inhabit — there are 4 yugas (ages) on Earth: Satyug, Treta, Dwapar, and Kaliyug. In Satyug the human lifespan is 100,000 years; in Treta it is 40,000–50,000 years; in Dwapar it is 1,000 years; and in Kaliyug human lifespan is 100 years. In Andromeda, there are not 4 yugas; time operates differently there. In many cosmoses there are 5 yugas, in many there are 6 yugas, each with their own time duration. And there are cosmoses far grander than those with 14 realms.

Just as the Creator of the galaxy possesses 12 Kala of power and created many Shivas — many Shivas have 4 Kala of power, many have 3, many have 2, many have 1 — these Shivas range from 1 to 4 Kala. Whoever has more power creates a larger cosmos. The 4-Kala Shivas have cosmoses spanning 4 light-years, and within those cosmoses there are many smaller cosmoses.

When the state of Tamoguna (inertia and darkness) within those cosmoses increases greatly, Vishnu brings those cosmoses to an end.

Time in cosmoses changes according to the state of the souls within them. The Shiv who has more Kala creates a larger cosmos with more realms (dimensions). Shivas with fewer Kala create smaller and more limited cosmoses, which also have shorter lifespans. When darkness, ignorance, and Tamoguna increase greatly in a cosmos, it becomes difficult for balance to be maintained there. Then that cosmos is brought to an end, so that a new and pure creation can come into being again.

Every cosmos moves towards its end when its time is complete. In this way, the cycle of creation and dissolution continues endlessly. When the Creator — the Shiv of a

cosmos — runs out of power, meaning when he no longer has energy to run the cosmos, he burns the entire cosmos to ashes and absorbs it within himself — that cosmos becomes a black hole.

CHAPTER VI

Planets Like Diamond, Gold, and Water

From a scientific perspective, space agencies such as NASA believe that there may exist planets in the universe whose composition is very high in carbon. Within such planets, due to extreme pressure and heat, a large portion of the carbon could transform into a diamond-like structure. For this reason, scientists express the possibility that some planets could be “Diamond Planets.”

However, science also makes clear that this does not mean the entire planet would be a shining pure diamond on the outside; rather, the inner layers could have a denser diamond-like solid structure.

Similarly, scientists also believe that some planets could have an extremely high proportion of water — which they call “Water Worlds.” These planets may have vast oceans beneath or above the surface, and the physical conditions there may be entirely different from Earth.

Science holds that planets are formed through pressure, temperature, chemical elements, and physical processes. Bapuji, however, explains that the creation of planets occurs not only through physical elements, but also according to the consciousness operating there, the karmic order, and the capacity of the souls.

Bapuji explains that there are diamond-like and gold-like planets, and many planets consist solely of water. Many planets are such that they give the appearance of water, but water is not actually present. These are not merely physical structures; they are expressions of the consciousness and laws of creation of that realm.

Bapuji explains that in creation there are not only planets made of soil, stone, metals, and gases, but also entire realms

and planets whose very creation is from subtle elements like gold. According to him, these elements are not like the diamond and gold of Earth; rather, they are extremely subtle, energy-filled, and conscious elements that manifest in accordance with the consciousness of that realm and the state of the beings who reside there.

CHAPTER VII

The Relationship of Galaxy Creators

The Creators of our galaxy and the Andromeda Galaxy are brothers — not in the sense that they are ordinary creators of the same level, but in the sense that both originated from the same Supreme Source. The father of the Creators of both these galaxies is one and the same — Param Maha Shiv. For this reason, the Creator of our galaxy and the Creator of the Andromeda Galaxy have both originated from the same divine lineage.

Despite having the same father, the Kala and power of the two are not equal. The Creator of our galaxy is of ten Kala, while the Creator of the Andromeda Galaxy is of twelve Kala.

This “Kala” is not merely a measure of power, but is the level of depth of consciousness, the capacity to create, and the divine ability to govern laws.

For this reason, the system of creation, the order of life, and the composition of elements in the Andromeda Galaxy are considered more subtle and advanced than those of our galaxy.

Not only our galaxy and Andromeda, but the Creators of all 172 galaxies are also brothers, because the original Creator of all those galaxies’ Creators is one and the same — Param Maha Shiv. This means that the entire group of 172 galaxies has originated from one and the same divine source.

In the Kala, the experience, the vision, and the style of creation of every galaxy’s Creator, there are subtle differences. Due to these differences, in some places the number of realms differs, in some places the nature of elements differs, and in some places the extent of souls’ powers differs.

CHAPTER VIII

Cosmic Travel: “WORMHOLE”

To travel from one galaxy to another — what we may call cosmic travel — a “ropeway” or “wormhole” is used. To enter the Andromeda Galaxy from our Milky Way, there is a special “visa card” or “gateway.” One gateway is in our galaxy and the other is in the Andromeda Galaxy. Between these two gateways there is a light ropeway.

Between two galaxies, many ropeways exist. Souls residing in different galaxies create different ropeways according to their needs. These wormholes are made from the power of Supreme Light (the Creator’s Kala) and are composed of light. Some wormholes are of 4 Kala, some of 5 Kala, some of 6 Kala, and there are wormholes of 10 Kala as well.

Upon entering the wormhole from our Milky Way Galaxy, souls emerge directly in Andromeda, and this journey is completed in just 1 second. For example, in an 8-Kala wormhole, the speed is 200 billion light-years per second — meaning the speed of an 8-Kala formless soul is 200 billion light-years per second.

In these wormholes, souls travel in a formless (nirakari) state aboard craft (UFOs). No individual soul can travel through a wormhole alone; travel is only by craft. These craft have varying capacities. Some craft carry 5,000 souls, some 10,000, and there are craft carrying 500,000 souls. These craft are made of light and are not heavy like gross matter.

To travel through a wormhole, a “visa permission” is mandatory. Whether it is the Andromeda Galaxy, the Milky Way, or any other galaxy, wormholes have entry and exit gateways. At these gateways there are automatic supercomputers that control the entire process. Even our quantum computers are nothing compared to these advanced supercomputers.

Inter-Galaxy Travel and Fees

When travelling from one galaxy to another, a kind of fee must be paid, which takes the form of the soul's power (Kala). For example, to travel from Andromeda to another galaxy through the light wormhole, the energy or "light" of that wormhole is consumed. This consumed energy must be replenished in the form of a fee, paid as power to the owner of that wormhole.

The Nature and Speed of Craft

These craft are not made of gross matter but of light. "Light" here means energy or power.

If the nearest solar system to ours in the Milky Way is 4.2 light-years away, and even a craft of 1 Kala covers this distance, it would take a fraction of a second — a trillionth of a second by Earth's measure. Souls that travel from our galaxy to another galaxy, where the distance between the two galaxies is 4 million light-years, use wormholes of 8 Kala, 10 Kala, or 11 Kala. The speed of an 8-Kala craft is approximately 200 billion light-years per second.

Rules for Galaxy Travel

According to Bapuji, travelling from one galaxy to another is not merely a matter of physical science; it is based on the power of the soul and divine laws. Just as there are rules for going from one country to another on Earth, cosmic travel also has special rules.

The Law of Soul Power (5-Kala Power): Bapuji explains that to exit one galaxy and enter another, a soul must have a minimum of 5-Kala power. Souls whose power is less than this cannot cross the boundary of their galaxy, whereas souls who possess 6 to 9 Kala of power can acquire knowledge of and travel through the entire galaxy in less than one second.

CHAPTER IX

Cosmic Laws

The Merging of Solar Systems

Do solar systems collide with each other? Bapuji explains that a larger solar system absorbs a smaller solar system into its own power, in order to increase its own strength. The Creator of that solar system does this through the power of his resolve (sankalp). The Andromeda Galaxy is an extremely vast and well-organised structure, based on certain specific laws; the Creator (Maha Shiv) sits in Maha Paramdham at its centre and governs it through his power.

The Precise Motion of Galaxies

Our galaxy moves at 250 kilometres per second, and the Andromeda Galaxy also moves at the same speed, so that the distance between them is maintained. Similarly, in our cluster of 172 galaxies, all galaxies maintain their distances from each other. Not even 1 kilometre per second can be altered in their revolution — Bapuji has seen this and stated it through his divine vision.

Galaxy Collision: A Myth

Scientists say that galaxies will collide with each other, but Bapuji says that galaxies never collide. The Creator of a galaxy keeps the galaxy balanced. This means that this entire vast universe — the galaxy — is alive, and the conscious power of Param Maha Shiv who created it is the force behind it. Just as the Creator who runs the 172 galaxies sits in Maha Paramdham at the centre, he holds great power. Through the gravity of his power, all galaxies revolve around him.

The Theory of Karma

Bapuji explains that the unbreakable law of karma is not limited to Earth alone; it is effective in Andromeda as well:

- **“The Same Law of Karma:”** The residents of Andromeda also know and observe the “Theory of Karma.” There too, coverings accumulate on souls based on their karmas.
- **“The Causal and the Great-Causal Body:”** The humans there also have causal and great-causal bodies like ours, which keep a record of their karmas.
- **“The Fall of Souls:”** When souls fall into attachment to elements, the coverings of karma increase upon them, reducing their power (Kala).

The Battle Between the Divine and the Demonic, and the Transformation of Species

In cosmoses with a Mrityu Lok, situations of conflict between the divine and the demonic are the same as described in our scriptures:

- **“Gods Becoming Demons:”** According to Bapuji, when the good karma of the gods is exhausted and they begin committing sinful acts, those very gods become demons.
- **“The Fall of Realms:”** Due to sin, souls fall from higher realms into the nether realms (Patal Lok — such as Atal, Vital, Satal).
- **“Change of Species:”** Due to their fall, even high-order souls can descend into animal species.
- **“State of Conflict:”** In the Mrityu Lok portions of Andromeda, a clash between righteousness and unrighteousness is also observed, although the order there is far more powerful and strict compared to our Milky Way.

CHAPTER X

Difference in the Order of the Milky Way and Andromeda

Bapuji explains that in our Milky Way Galaxy, almost everyone is granted entry, but in Andromeda the order is very powerful. Not every ordinary traveller is granted entry there, which maintains the discipline and energy level of that place.

Cosmic travel is not merely a matter of technology but a matter of soul power (Kala). Andromeda is a high-level galaxy where only souls with eligibility and high Kala can gain entry. The security system of Andromeda is entirely disciplined and hierarchical.

The Creation of the Universe: A Divine Play and Habit

Rather than there being any complex reason behind creation, it is the Creator's natural expression. The creation of these galaxies and cosmoses is, for the Creator, like a natural habit (swabhav sanskar). This entire process is a "system" that the formless being creates, maintains, and ultimately dissolves. Shiv becomes embodied from the formless, and then through Vishnu and Brahma creates the entire cosmos (solar system).

Ultimately, the creation and dissolution of infinite cosmoses is nothing but the ever-continuing divine play of that Supreme Being. Just as with a single resolve creation comes into being, in the same way at the time of dissolution, Maha Shiv (Creator of the galaxy) assumes the form of Mahakal and with a single resolve, burns infinite crores of cosmoses (solar systems) to ashes and absorbs them into every pore of his being.

Time in Andromeda

According to Bapuji, the Andromeda Galaxy is not only larger in size than our Milky Way, but the nature of time and Maya (illusion) there is also very profound.

- **“The Birth of Creation:”** The 172 galaxies including our Milky Way and Andromeda were all born together from a single MahaSankalp (grand resolve) of the Creator. Although they were born together, each galaxy’s time operates according to its own power (Kala).
- **“The Cycle of Time:”** Just as in one cosmos of ours, the lifespan of Brahma is considered to be 100 years, similarly in the 3,000 billion cosmos (solar systems) of Andromeda, each has its own cycle of time.
- **“Difference in Ages:”** The speed of time in Andromeda is not like that on Earth. In many solar systems there are 4 ages (Satyug, Treta, Dwapar, Kaliyug) like ours, while in some places a cycle of 6 ages also operates.
- **“Long Life:”** Since Andromeda is a galaxy of 12-Kala, it is more powerful than our galaxy and its existence will continue for a very long time. The play of creation and dissolution has been going on here since infinite time.

The Nature of Maya in Andromeda

According to Bapuji, Maya is not only present on Earth; it is part of the entire cosmic system. One form of Maya is that souls become so absorbed in their small world that they are not willing to go to higher realms. The comforts and conveniences of their present world begin to feel real to them — which is itself an effect of Maya.

BAPUJI INSIGHTS

Wisdom from the Divine

· ★ ·

- ♦ **Hamari Milky Way galaxy se lagbhag 30-35 lakh prakash varsh door hai Andromeda galaxy.**

Meaning: The Andromeda Galaxy is located approximately 30-35 lakh (3-3.5 million) light-years away from our Milky Way Galaxy.

- ♦ **Andromeda galaxy ka 1.46 se 1.6 lakh prakash varsh ka diameter hai.**

Meaning: The diameter of the Andromeda Galaxy is between 1.46 to 1.6 lakh light-years.

- ♦ **Ek surya maana ek solar system maana ek bramand.**

Meaning: In this spiritual context, one sun represents one solar system, considered one "Bramand" (universe).

- ♦ **Andromeda galaxy ke andar 3000 billion bramand (solar system) hain.**

Meaning: The Andromeda Galaxy contains 3000 billion solar systems or universes.

- ♦ **Galaxy ke beech mein jo creator hota hai, use Maha Bramha kehte hain.**

Meaning: The creator located at the center of a galaxy is called "Maha Bramha."

- ♦ **Galaxy ko banane wala Maha Shiv hota hai.**

Meaning: A "Maha Shiv" is the supreme entity responsible for the creation of a galaxy.

- ♦ **172 galaxies ek hi sankalp se paida hui hain.**

Meaning: A group of 172 galaxies was created through a single “Sankalp” (thought-will).

♦ **Sabhi galaxies ke aakash tatva (ether) alag-alag hote hain.**

Meaning: The element of space or ether differs across different galaxies.

♦ **Wahan manushya 6, 8 ya 10 tatvon ka bana hota hai.**

Meaning: Beings there can be composed of 6, 8, or even 10 elements.

♦ **Andromeda galaxy ka creator 12 Kala ki shakti rakhta hai.**

Meaning: The creator of Andromeda possesses 12 “Kala” (degrees of spiritual power).

♦ **Wahan ke bramandon mein bhi mrityu lok (physical world) hota hai.**

Meaning: The universes there also have a physical plane called “Mrityu Lok.”

♦ **Wahan bhi 4 yug hote hain, aur kahin-kahin 6 yug bhi hote hain.**

Meaning: Time cycles exist there too—some with 4 eras, others with 6.

♦ **Doosri galaxy mein jaane ke liye aatma mein kam se kam 5 Kala ki power chahiye.**

Meaning: A soul must have at least 5 “Kala” of power to travel to another galaxy.

♦ **Andromeda mein bhi theory of karma lagu hoti hai.**

Meaning: The law of Karma is active in Andromeda as well.

♦ **Wahan ke manushyon ke paas bhi kaaran sharir aur mahakaran sharir hota hai.**

Meaning: Beings there also possess causal and great causal bodies.

♦ **Vimaan (spacecrafts) wahan bhi hote hain aur unhe ek galaxy se doosri galaxy jaane ke liye permission leni padti hai.**

Meaning: Spacecraft exist there and require permission to travel between galaxies.

♦ **Maha Shiv 'Mahakaal' bankar anant koti bramandon ko apne aap mein vilin kar deta hai.**

Meaning: Maha Shiv, as Mahakaal, dissolves countless universes into itself.

♦ **Aatma ki power jitni adhik hogi, use utna hi gehra gyaan samajh aayega.**

Meaning: The greater the soul's power, the deeper knowledge it can understand.

♦ **Galaxy ke center point ke paas 'param prakash' (param light) ki duniya hoti hai.**

Meaning: Near the center of a galaxy exists a realm of "Param Light."

♦ **Apni aatma ko jaankar hi in anant vishva ke rahasyon ko samjha ja sakta hai.**

Meaning: Only through self-realization can one understand the mysteries of the infinite universe.

GLOSSARY

Spiritual Terms

Andromeda Galaxy — A massive galaxy with a diameter of approximately 1.46 to 1.6 lakh light-years, located about 30-35 lakh light-years away from the Milky Way.

Mandakini (Milky Way) — The name used in ancient scriptures for our own galaxy, which contains about 800 billion suns.

Bramand (Universe/Solar System) — In this spiritual context, a single solar system is often referred to as one “Bramand” or universe.

Maha Shiv — The supreme creator entity of an entire galaxy who possesses the power to manifest multiple “Shivas” to manage different parts of the creation.

Maha Bramha — A high-level creator entity located at the center of a galaxy, often associated with what scientists call a “supermassive black hole”.

Kala (Degree of Power) — A spiritual measure of light and authority; for example, the Andromeda Galaxy is described as having 12 Kala of power.

Paramdham — The supreme, formless abode located at the center of the galaxy where the creator resides in a state of immense power.

Mrityu Lok — The “world of death” or the physical plane where souls inhabit mortal bodies made of elements.

Panch Tattva (Five Elements) — The basic building blocks of physical bodies in our galaxy; however, in Andromeda, beings may be composed of 6, 8, or even 10 elements.

Aakash Tattva (Ether/Space Element) — A subtle element that differs in quality across different galaxies, forming the atmosphere and basis for life.

Karan Sharir (Causal Body) — The subtle body of a soul that carries its records and karma, existing even in the advanced beings of Andromeda.

Param Light — A high-frequency spiritual light or energy that composes the higher dimensions and the bodies of advanced souls.

172 Galaxies — A specific group or cluster of galaxies that were created simultaneously through a single thought-Sankalp of a higher creator.

Viman (Spacecraft) — Advanced interstellar vehicles used for travel between solar systems and galaxies, often requiring high spiritual power to operate.

Theory of Karma — The spiritual law of cause and effect that governs soul evolution, which is understood and active in Andromeda just as it is on Earth.

Nirakar (Formless) — The state of being without a physical or subtle form, characteristic of the highest creators and souls in the Paramdham.

Yuga (Eras) — Time cycles (like Satyug or Kaliyug) that govern the spiritual age of a world; some universes in Andromeda have 4 or even 6 such eras.

Aatm-Gyan (Self-Knowledge) — The spiritual realization of one's true nature as a soul, which advanced beings in both galaxies strive to achieve.

Mahakal — The aspect of the supreme creator that eventually dissolves or “devours” millions of universes (Bramands) during the process of cosmic dissolution (Pralay).

Sankalp (Thought-Will) — The power of pure intention used by high-level spiritual entities to create entire galaxies or universes instantaneously.

PARAMSHANTI: ANTIM PARAM SATYA

A Spiritual Film on Bapuji Dashrathbhai Patel

Presented by Vishwa Parivartak Ishwariya Vidhyalay

Spiritual Movie Arriving in

2026

Soon... THE WORLD WILL KNOW

An upcoming spiritual biographical film based on the divine life, journey, and realisation of the ultimate truth by Bapuji Dashrathbhai Patel. The film traces Bapuji's extraordinary path — from a young soul who questioned God about the suffering of humanity, to the supreme spiritual realisation of Param Shanti — the Antim Param Satya: the final, supreme truth.

COMING SOON....

CONNECT WITH US

Continue this journey with Bapuji and the Paramshanti family. Daily live sessions, guided meditations and video teachings of Bapuji — free and open to all.
