About Bapuji

Bapuji (full name: Bapuji Dashrathbhai Patel, also lovingly called “Dadaji” by the younger generation) was born in 1956 in the small village of Akhaj in the Mehsana district of Gujarat. However, he spent his childhood in another village named Ambasan, also located in the Mehsana district.

In the early part of his life, he was a highly successful lawyer. Later, he devoted his life to realising the supreme spiritual truth and bringing this divine knowledge forward for the welfare of humanity. Today, this supreme knowledge serves as a guiding light for true seekers to realise their ultimate destiny. It is a blessing of the highest divinity that the present time is witnessing the rise of this supreme spiritual knowledge, guiding souls on Earth to return to their original source.

Despite being raised in a very poor family and facing challenging circumstances, Bapuji had a deep desire to transform this sorrowful and suffering world into a better place. At the young age of six, he questioned God repeatedly, asking why God remained silent about the suffering of humanity. This intense longing to end human suffering eventually led him to attain the highest level of spirituality later in life.

Even as a child, Bapuji would spend hours alone in the fields, often neglecting his own comfort. Due to poverty, he would walk barefoot, frequently getting

pricked by thorns. Many times, he would stay late in the fields and, on his way back home, encounter subtle world entities. These experiences sparked his interest in communicating with subtle world souls.

Bapuji was courageous from a young age, which helped him overcome many obstacles. Alongside his studies in chartered accountancy (CA), he gave tuition classes to support himself financially. Later, he completed his Bachelor of Law (LLB) degree and became a well-known lawyer in Ahmedabad.

In 1997, he established a spiritual institution called “Vishwa Parivartak Ishwariya Vidhyalay” in Chenpur, Ahmedabad, with the mission of transforming this mortal world, filled with suffering and disorder, into an eternal divine world of immortality. Smt. Sushma Tandon, lovingly known as “Maa,” worked alongside Bapuji in this grand divine mission.

To accomplish this mission, Bapuji worked tirelessly, dedicating all his resources to this divine purpose. During that time, he would deliver continuous spiritual discourses for up to eighteen hours without rest. In these discourses, he explained the highest dimensions of divine knowledge, which he realised through deep meditation and divine vision in a state of superconsciousness. This knowledge goes beyond the imagination of the ordinary human mind.

Bapuji’s teachings cover a vast range of topics, including the types of celestial creators across

different dimensions, the creation of our solar system, galaxy, and universe, and most importantly, the transcendental knowledge of the multiverse and realities beyond it. His knowledge is supremely profound and is intended for highly evolved seekers, referred to as *behad* souls. According to Bapuji, these *behad* souls will play a key role in transforming this mortal world into an eternal divine realm.

At present, Bapuji remains deeply engaged in intense meditation and samadhi for long hours. He does not meet anyone, as he is continuously immersed in his transcendental mission in a superconscious state.

Preface

Opening Words

“Gyan Daan Maha Daan” (Sharing Knowledge is the Highest Charity) — Bapuji Dashrathbhai Patel

Modern science is perhaps the most powerful tool humanity has ever built. Yet for all its extraordinary achievements — from mapping the genome to launching probes beyond our solar system — science has remained conspicuously silent on the most fundamental question of all: What is consciousness?

This book is a faithful rendering of a live spiritual discourse delivered by Bapuji Dashrathbhai Patel, in which he addresses precisely that silence. With remarkable clarity, Bapuji reveals why modern science cannot accept *chetan* (consciousness) as the primary element of existence, and what would happen to the entire scientific framework if it ever did.

The discourse is not an attack on science. Rather, it is an invitation — an invitation to look more honestly at the limits of a purely materialistic worldview, and to consider that the source from which all science arises is something far deeper than matter itself.

Bapuji makes the case plainly: science emerged from the power of *sankalp* (divine thought). The cosmos was created by consciousness, not the other way around. Any tool born from a source can never surpass that source. This is why, however advanced

science becomes, it will always remain within the boundaries set by the spiritual laws that preceded it.

The reader does not need any prior knowledge of Bapuji's framework to benefit from this book. Every key term is explained on first use and defined in the glossary at the back. Whether you approach this from a scientific background, a spiritual one, or simply from curiosity, the questions raised here will challenge you to look inward — where, according to Bapuji, all ultimate answers reside.

— *Presented in the spirit of Gyan Daan*

Editorial Note

Note on Source Discourse

This book is based entirely on Episode 906 of the Param Shanti Motivation and Meditation YouTube channel, delivered as a live Hindi discourse by Bapuji Dashrathbhai Patel.

Every word of content in this book traces directly to Bapuji's original spoken discourse. No external interpretation, commentary, or elaboration has been added. Where Bapuji references other discourses or teachings, those references are preserved faithfully without expansion.

Hindi and Sanskrit spiritual terms have been italicised throughout and defined on first use. A comprehensive glossary of all key terms appears at the end of the book.

Passages that formed part of the channel's administrative announcements, viewer engagement requests, and the personal channel introduction have been respectfully omitted so that the spiritual and philosophical content stands clearly on its own.

The source video may be viewed at the link provided in the Video Source section at the back of this book.

Chapter One

The Two Operating Systems

Before we can understand why modern science and spirituality appear to be in conflict, we must first understand that they operate from entirely different foundations. They are, in essence, two different operating systems running on two different logic sets.

The foundation of modern science rests on four pillars: *measurement* (the ability to quantify everything), *repeatability* (an experiment must yield the same result every time), *third-person observation* (an external observer must be able to verify results), and *physical instruments* (all measurement tools are composed of the five gross elements). Every discovery science makes, every law it formulates, must pass through this filter.

The foundation of spirituality is entirely different. It rests on *pratyaksh atm anubhav* — direct, first-person self-experience; on *antarmukhi chetana* — inward-turned consciousness; on *sadhana* and *tapasya* — disciplined practice and inner refinement; and ultimately on the transformation of consciousness itself.

Bapuji said that the operating system of science is completely different from spirituality. Science works on measurement, repetition, and third-person observation, while spirituality works on direct self-

experience (atma-anubhav), inward consciousness, and transformation of the self.

Bapuji explained that all scientific instruments are made from the five gross elements, so they can only detect what is gross. They cannot detect the subtle or the consciousness behind creation. He further said that even today, science only understands a small visible portion of the universe, while the majority remains unknown — which clearly shows its limitation.

Notice what this difference means in practice. Science can only measure what its instruments can reach. Those instruments are all made of the five gross elements — *prithvi* (earth), *jal* (water), *agni* (fire), *vayu* (air), and *akash* (ether). A gross instrument can only detect a gross reality. It cannot, by its very nature, detect that which is subtler than itself.

Spirituality, by contrast, uses the faculty of consciousness itself as its instrument. The inner experience of a *yogi* in deep meditation is not a third-person observation — it is a first-person encounter with reality at the subtlest possible level. Bapuji said that the soul itself cannot be measured or seen by any instrument. If the soul cannot be detected, then how can science claim to fully understand existence? He also emphasised that divine realities cannot be proved

through physical tools — they can only be experienced through consciousness.

This is why the findings of deep spiritual experience have never been falsified by science: they operate on a different plane of existence altogether.

Bapuji makes a further point that cuts to the heart of the matter. Science, he says, came much later. At the time of creation itself, there was no science as a subject, no separate disciplines, no laboratories. What existed was *adhyatmik vigyan* — spiritual science, the direct knowledge of creation. The subjects we call chemistry, physics, and biology were not present when the universe was being made. The universe was made through the *sankalp* of consciousness. Science emerged later, as evolving human minds tried to understand through intellect and measurement what had already been built through divine thought.

This means that science, however brilliant, is always studying a product. It is not studying the producer. And a product, however sophisticated, can never fully understand the intelligence that created it.

Chapter Two

The 95% Unknown Universe

One of the most honest admissions in modern science is also one of its most striking: by its own calculations, ninety-five per cent of the universe remains entirely unknown to it.

Of everything that exists in the cosmos, only five per cent is what science calls visible or “ordinary” matter — the galaxies, stars, planets, and dust clouds that telescopes and detectors can register. Of the remaining ninety-five per cent, approximately twenty-seven per cent is classified as “dark matter,” and sixty-eight per cent as “dark energy.”

Science calls these things dark not because they are dangerous or negative, but because it cannot detect them directly. It can only infer their existence from the gravitational effects they exert on visible matter. The instruments that science possesses — all made of gross physical elements — simply cannot register these realities.

Bapuji sheds a profound light on what this darkness actually is. He explains that what science calls dark energy and dark matter is, in truth, *param prakash* — the supreme light. It is not darkness at all. It is simply beyond the reach of any physical measuring device. Because science’s instruments cannot detect it,

scientists have labelled it “dark.” But the absence of detection is not the same as the absence of existence.

This is a crucial distinction. When we say something is unknown, we say something about the limits of our knowledge, not about the nature of the thing itself.

The vast ocean that lies beyond what science can currently see is not an absence — it is an unexplored presence.

Bapuji further points out that the observable universe — the portion that light has had enough time to reach us from — is only a fraction of what actually exists. Beyond what is visible lies an incomprehensibly larger reality. And beyond even our universe lie the *Maha Brahmand* (the galaxy-level reality) and the *Param Maha Brahmand* (the universe itself), and beyond those the boundless multiverse that Bapuji describes in his other discourses.

The point is not to criticise science for not knowing. The point is to hold science to its own standards of honesty: if ninety-five per cent of what exists is beyond your current reach, intellectual humility demands that you remain open to entirely different frameworks of understanding — including spiritual ones.

Bapuji’s observation is simple and precise: science uses gravity to model everything it cannot see, building mathematical models and running particle detectors. Yet it never asks the deeper question —

whose gravity? What is the source of gravitational pull? Is it possible that gravity itself is an expression of a deeper, subtler field — a field that originates in consciousness? Science does not ask this. And the reason it does not ask it is the subject of the next chapter.

Chapter Three

Consciousness as the Fundamental Element

At the heart of modern science sits a model so deeply embedded that most scientists never consciously examine it. This is the *materialist model*, and it states the following: first came matter, then came the brain, and then from the brain arose consciousness. In this model, *chetana* (consciousness) is a by-product — a late arrival, an accident of biological complexity.

The implication of this model is profound. If consciousness is produced by the brain, then when the brain stops functioning, consciousness ceases. There is no survival after death. There is no soul. There is no continuity of the self beyond the body. You are, in this view, a temporary arrangement of atoms that briefly became self-aware, and will shortly cease to be.

Now consider what happens if you reverse this model. What if *chetana* — consciousness — came first? What if the sequence is not matter → brain → consciousness, but consciousness → matter → brain?

Bapuji points to exactly this inversion. According to the spiritual understanding that he transmits, *atma* (the soul, the unit of consciousness) is primary. The soul existed before matter. Matter is the *manifestation* of the soul's divine thought — its *sankalp*. And the brain, far from being the generator

of consciousness, is a *receiver* — an interface through which the soul interacts with the physical world. The brain does not produce consciousness; it receives it.

This is not a small adjustment. This is a complete inversion of the entire framework. Everything that science has built on the assumption that matter is primary must now be re-examined from the opposite direction.

Bapuji connects this to the original creation process. He explains that *Brahm* — the supreme, formless, unmanifest consciousness — had the first *sankalp*: the intention to become many from one. From that intention arose *aakari Shiv*, the first formed expression of consciousness. From *Shiv* came *Shakti*. From *Shiv-Shakti* came Brahma and Vishnu. From Brahma came the *Saptarishi* — the seven cosmic sages. Each step was a descent of consciousness into increasingly denser expressions of existence.

The world of *param tattva* — supreme elements — came first. In the age of *Shivpuri*, existence was one hundred per cent supreme elements, the purest possible state. In the age of *Vishnupuri*, it was fifty per cent supreme and fifty per cent gross. In the age of *Brahmpuri*, the elements grew progressively denser. This is the descent from pure consciousness into matter — not an ascent of matter into consciousness.

Science, confined to studying the grossest end of this descent, cannot see the source. It is as if someone were studying a river by only examining the estuary and had no knowledge that the river originated in mountains far upstream.

Bapuji said that science is limited only to the light of our sun and solar system. It cannot even fully understand this system, so how can it understand creation beyond it?

Chapter Four

The Creation Model Overturned

If science were to accept that consciousness is the primary element — the *mool tattva* — the consequences for its entire established framework would be extraordinary. Bapuji walks through these consequences with precision.

Physics Would Be Overturned

Today, physics treats the universe as a mechanical system — a vast, intricate machine governed by laws that operate without any awareness or intention behind them. If consciousness is primary, the universe is not a dead machine. It becomes a conscious process. Every particle, every field, every gravitational interaction would need to be re-understood as an expression of an underlying awareness. The entire cosmological framework — including the Big Bang theory — would face a fundamental challenge, because the Big Bang itself has no explanation for why it happened or what preceded it. A conscious universe demands a conscious cause.

Biology Would Be Overturned

Today, biology tells us that life is the result of chemical reactions — that a complex enough arrangement of molecules somehow becomes alive. If consciousness is primary, life is not the outcome of

chemistry. Life is an expression of consciousness. The entire theory of evolution would need to be re-examined. Bapuji's understanding is that the human being is not an elevated animal but a *fallen deity* — a divine being who has descended into the gross world over cosmic cycles. The face of the deity does not resemble an animal, and this is not accidental.

The Medical System Would Be Overturned

Today, medicine is almost entirely body-centric. Treatment is aimed at the physical body and the physical brain. If consciousness is primary, then disease is not only physical. An imbalance at the level of *chetana* — at the consciousness level — can manifest as physical illness. The causal body, which Bapuji explains is composed of *akash tattva*, lies entirely beyond the reach of any current medical instrument. Healing that does not address the consciousness level is addressing only the symptom, not the source.

The Definition of Death Would Be Overturned

Today, science defines death as the end of brain function and therefore the end of consciousness. If consciousness came before matter and is not produced by the brain, then the brain dying does not mean consciousness ends. The soul continues. It begins what Bapuji calls the *sukshma yatra* — the subtle journey — moving on to other realms and other

experiences. Life and death, as science currently defines them, would need to be entirely reconceived.

This is not a hypothetical concern for scientists. It is, as Bapuji points out, a question that directly touches the identity and destiny of every human being. A person who lives their entire life believing that death is the end of their consciousness will make entirely different choices than a person who understands that the soul is primary and continues beyond the body.

Chapter Five

What Changes When Consciousness Is Primary

The implications of accepting consciousness as the fundamental element extend far beyond laboratories and lecture halls. They reach into every dimension of how a society is organised.

The Economic System Would Be Transformed

The engine of the modern economy is desire — the desire to acquire more, to consume more, to compete more. This engine is fuelled precisely by the belief that the self is the body and that material things bring fulfilment. When a person truly understands that their real identity is *chetana* — consciousness — and not matter, their desires naturally diminish. *Atma tripti* — the contentment of the soul — replaces the endless hunger for more. Competition, overconsumption, and the anxiety that drives them would reduce organically. Not through external regulation, but through a genuine change in how people understand themselves.

The Education System Would Be Transformed

Today, education is almost entirely matter-based. It trains the mind to process data, acquire skills, and compete in the marketplace. If consciousness is primary, education would need to include self-awareness as a core subject. It would need to teach meditation and *dhyan yog*, moral and ethical

development through frameworks such as *Ashtanga Yog* (the eight-limbed path), and the understanding of the soul's nature. Education that trains only the brain while leaving consciousness undeveloped produces capable but incomplete human beings.

Power Structures Would Be Transformed

When a person realises that real power lies within — in the consciousness, not in external authority, wealth, or status — external control over them weakens naturally. *Antar swatantrata* — inner freedom — grows. The person who knows the source of real power cannot be manipulated by those who offer only outer substitutes.

Our Understanding of Human Identity Would Be Transformed

Science currently tells us that we are “random biological accidents.” We arrived here by chance. There is no purpose, no design, no meaning beyond what we individually invent. If consciousness is the primary element and the universe is a conscious process, then we are not accidents. We are expressions of universal consciousness — deliberate, purposeful, each soul part of the great unfolding of Brahm's original sankalp. The loneliness, purposelessness, and existential anxiety that afflict so much of the modern world have this confusion at their root: people have been told they are accidents, when in truth they are expressions of the infinite.

This last point, Bapuji notes, is where science's resistance to consciousness becomes most personal. Accepting consciousness as primary is not just an intellectual adjustment for scientists — it strikes at the ego of the materialist paradigm itself. It requires admitting that all the certainty built up over centuries of materialist science was built on an inverted premise.

Chapter Six

The Mystery of Akash Tattva

Among the five elements described in the Vedic tradition — *prithvi* (earth), *jal* (water), *agni* (fire), *vayu* (air), and *akash* (ether) — it is *akash* that holds the deepest mystery and on which modern science is almost entirely silent.

Akash is not simply empty space. This is a fundamental error of the materialist view. Empty space, in Vedic understanding, does not exist. *Akash* is a subtle field — a realm of vibration, thought, and possibility. It is the medium through which consciousness leaves its impressions. The concept of the Akashic records — the idea that every thought, every event, every soul's journey is recorded in this field — flows from this understanding. *Akash* is never empty; it is perpetually full.

Interestingly, modern physics has come closer to this understanding than it might acknowledge. Quantum physics has established that even a perfect vacuum is not truly empty. At the quantum level, constant fluctuations occur in empty space — virtual particles appear and disappear, energy levels rise and fall. Scientists call this the “quantum vacuum” and acknowledge that it is far from inert.

Yet physics stops at the observation. It notes the fluctuations without asking what is causing them. It

does not ask: whose vibration is this? From which consciousness do these fluctuations originate? If the quantum vacuum is not empty, what is it full of? These questions do not arise within the materialist framework because answering them would require acknowledging consciousness as the underlying field from which all physical phenomena emerge.

Bapuji explains that the *karan sharir* — the causal body — is composed of *akash tattva*. This is the deepest of the three bodies that each soul inhabits: the *sthool sharir* (physical body), the *sukshma sharir* (subtle body), and the *karan sharir* (causal body). Modern medicine addresses only the first. Even the most advanced forms of psychological and energy medicine address only the second. The third — the causal body, the deepest root of a being's existence — is entirely beyond the reach of any current scientific instrument.

This is why so many physical diseases recur even after apparently successful treatment. The root cause, if it lies at the *akash* level — at the level of the causal body — has not been touched. Only direct work on the consciousness level, through genuine yog and spiritual practice, reaches that depth.

Science's silence on *akash tattva* is therefore not incidental. It is structural. The gross instruments of science will never measure a subtle field. The eye cannot see the one who is looking. The brain cannot

think about the consciousness that is thinking through the brain. To access *akash tattva*, one needs an interior instrument — and the only interior instrument is consciousness itself, turned inward.

Chapter Seven

Why Science Cannot Reach the Ultimate

Bapuji identifies four principal obstacles that prevent modern science from ever arriving at the ultimate truth. Understanding these obstacles helps explain not only science's limitations, but also why those limitations are, to a large degree, self-imposed.

The Materialist Worldview

Science has accepted, as its foundational axiom, that only matter is real. Anything that cannot be measured, quantified, and verified by a third-party observer is excluded from consideration. This is not a neutral stance — it is a philosophical commitment. And like all philosophical commitments, it determines in advance what conclusions are possible. A framework that begins by excluding consciousness will never discover consciousness as a primary reality, no matter how sophisticated it becomes.

Institutional Pressure

The scientific establishment has enormous investments — financial, professional, and reputational — in the current model. Researchers who challenge the materialist paradigm face significant professional risk. Funding, publication, and career advancement all depend on working within accepted norms. This creates a structural conservatism that is

independent of any individual scientist's personal openness or willingness to question.

Absence of Instruments to Measure Consciousness

This is perhaps the most practically limiting factor. Science measures everything with physical instruments. Consciousness, by its very nature, is not physical. It cannot be weighed, scanned, or quantified. Until science develops an entirely new kind of instrument — one that works from the inside out rather than the outside in — consciousness will remain beyond its methodological reach. And the only instrument capable of directly knowing consciousness is consciousness itself, trained and purified through genuine spiritual practice.

Fear of Paradigm Shift

This is, in many ways, the deepest obstacle. Scientists are human. They have built their identities, their careers, and their sense of intellectual coherence around a particular model of reality. To accept that consciousness is primary would not be a minor revision — it would be the most radical reorganisation of scientific thought in history. Every definition would change. Every model would need to be rebuilt from a different foundation. This prospect is genuinely frightening, and fear — even in scientists — is a powerful inhibitor of truth-seeking.

Bapuji's summation is precise: Science looks outward. Spirituality looks inward. The universe's deepest secrets are not in the outer cosmos — they are within the consciousness that is investigating the cosmos. Until science is willing to turn its gaze in that direction, it will continue to circle the periphery of reality without ever finding the centre.

This does not diminish science's great achievements. It simply means that science, valuable as it is, is not the final word. Truth, Bapuji says, cannot be proved by external evidence. Truth is always *pratyaksh* — self-evident, directly experienced. When the soul turns inward and encounters itself, no proof is needed. The experience is its own evidence.

Chapter Eight

Higher Civilisations and Spiritual Science

One area where science and spiritual understanding begin to converge — though science does not yet recognise it — is the concept of higher civilisations. The Kardashev Scale classifies civilisations by their energy use: Type One civilisations harness the energy of an entire planet; Type Two, the energy of a star; Type Three, the energy of a galaxy.

Bapuji goes far beyond this. He describes civilisations ascending not just to three or four, but continuing much higher — civilisations that did not merely use cosmic energy through physical technology, but operated directly through consciousness. The divine beings of past golden ages — the deities, the avatars, the great rishis — were not technologically advanced in the modern sense. They were spiritually advanced. Their power over nature, over matter, over space and time, came not from machines but from the direct operation of consciousness on reality.

The abilities attributed to sages in the ancient scriptures — healing the sick with a touch, traversing vast distances in moments, communicating across realms, manifesting physical objects through intention — were not mythology or exaggeration. They were the natural expressions of a consciousness operating at a

level of purity and power that current humanity cannot imagine.

“Higher civilisation” does not mean more powerful weapons or more efficient machines. It means the consciousness of its inhabitants is more refined, more expanded, more aligned with the original divine source.

The direction of true progress, therefore, is not outward toward greater technology, but inward toward greater spiritual realisation. This is not a rejection of material development — it is the recognition that material development without corresponding spiritual development is inherently unstable and ultimately self-destructive.

Bapuji’s teaching is that we are at a pivotal moment in the cycle of creation. The path forward — the only path that leads to genuine wellbeing for both the individual soul and for the world — is not greater scientific achievement alone, but *adhyatmik vigyan* — spiritual science. The science of the soul, of consciousness, of the inner universe, must now come forward to lead the way.

Chapter Nine

Soul Power Or Science The Ultimate Force Behind All Existence

Bapuji has spoken about **Kala (Soul Power)** as one of the deepest and most advanced aspects of Behad Gyan—far beyond conventional spirituality, science, or even meditation practices. His explanations connect Kala not just with the soul, but with **creation, manifestation, technology, karma, and future human evolution**. He explained that the gap between Kala (soul power) and modern science is only temporary, not fundamental. Today's science works through external forces—electricity, data, and physical matter—while Kala operates as the inner, conscious energy of the soul that can directly influence reality.

According to his teachings, future science will gradually move beyond mechanical systems and begin integrating consciousness, where Kala becomes the driving force behind advanced technology, healing, and even creation itself. In this view, science does not oppose spirituality; rather, it is an early stage that will eventually evolve into a higher, soul-powered science rooted in Kala.

Soul Power And Science

Bapuji presented one of his most forward-looking insights through the connection between Kala (soul

power) and science. He explains that present-day science is dependent on external forms of energy such as electricity, fuel, and data systems, operating through physical tools and hardware. However, this represents only an early stage of development. In the future, science will evolve toward the use of soul-based Kala energy, where consciousness itself becomes the primary source of power and functionality. According to him, highly advanced civilizations have already reached this stage, where Kala is used for transportation without mechanical vehicles, communication without devices, healing without medicine, and even the creation of structures through pure conscious intent. Looking ahead, he suggests that artificial intelligence and machines will not remain purely algorithmic but will begin integrating with consciousness-driven Kala systems. As a result, technology will gradually shift from hardware-dependent frameworks to consciousness-based systems, where the soul's power becomes central to innovation, operation, and creation.

Kala and Artificial Intelligence (AI)

Bapuji offers a profound perspective on artificial intelligence by linking it with Kala (soul power). He explains that present-day AI is largely data-driven, functioning through algorithms, patterns, and programmed logic. However, this is only a preliminary stage. In the future, AI is expected to evolve into **consciousness-assisted systems**, where

the role of Kala becomes central. Through Kala, machines may gain a form of intelligence that goes beyond fixed programming, allowing them to respond with deeper awareness and adaptability. Bapuji suggests that such systems could even interact with subtle dimensions, accessing levels of reality currently beyond human perception. At the same time, he gives a strong warning: if Kala-based AI develops without spiritual purity and inner balance, it could become highly dangerous. Therefore, true progress does not lie in advancing technology alone, but in the **awakening and purification of the soul**, ensuring that Kala is used with wisdom and responsibility.

Kala and Multiverse Creation

Bapuji Dashrathbhai Patel explains that Kala (soul power) is not limited to individual experience but is the very foundation of cosmic creation. According to his teachings, universes are created, sustained, and dissolved through **collective Kala**, with higher entities operating at immensely elevated levels of this power. What we perceive as time, space, and matter are not independent realities but expressions of Kala itself. In this understanding, Kala does not exist within the universe; rather, the entire universe exists within Kala, making it the ultimate field from which all existence emerges and into which it dissolves.

Kala& Liberation (Moksha)

He further connects Kala to the highest spiritual goal—moksha (liberation). Bapuji clarifies that moksha is not merely freedom from the cycle of birth and rebirth, but the **complete purification and mastery of Kala**. When Kala becomes fully pure, all karmic imprints dissolve, leaving no binding forces on the soul. When Kala is fully awakened, the soul transcends all dimensions, attaining absolute freedom beyond time, space, and creation itself.

Kala and Vibration

Bapuji Dashrathbhai Patel explains that Kala (soul power) is deeply connected with vibration, as every action, thought, and state of consciousness generates a specific vibrational frequency. These vibrations are not merely physical or emotional—they arise from the **level of Kala active within the soul**. A lower or impure Kala produces unstable, dense, and chaotic vibrations, which lead to confusion, karmic binding, and suffering. In contrast, when Kala becomes refined and purified, the soul begins to emit **subtle, stable, and high-frequency vibrations**, influencing not only one's inner state but also the surrounding environment and other beings.

He further teaches that vibration is the **expression of Kala in motion**. As Kala awakens, the vibrational field of the soul becomes more powerful and coherent, enabling deeper perception, stronger manifestation, and higher states of awareness. This is why advanced

spiritual beings can transform situations or environments simply through their presence—their Kala generates elevated vibrations that naturally harmonize reality. Ultimately, by purifying Kala, the soul aligns with higher vibrational states, moving closer to liberation and universal harmony.

Kala And DNA Coding

In the realm of modern science, DNA is recognized as the foundation of biological life — a molecular blueprint carrying genetic information. Yet, according to Bapuji Dashrathbhai Patel, the true origin and function of DNA cannot be understood merely on the physical level. DNA is deeply spiritual in nature, being an extension of the soul itself. This discourse unveils the profound spiritual science behind DNA, its connection to the causal body, and how divine energy influences its transformation.

Kala (soul power) as the central force behind existence, linking spirituality, science, vibration, and cosmic creation into a unified understanding. Kala is not merely a concept but the living power through which the soul experiences, creates, and transcends reality. As humanity evolves, the shift from external dependency to inner awakening will become essential, where true progress lies in mastering and purifying Kala. Whether in technology, artificial intelligence, or spiritual growth, the future depends on conscious development. Ultimately, the realization

and activation of Kala lead the soul toward complete freedom, harmony, and liberation beyond all dimensions. Till Science accepts existence of soul , consciousness, soul power the mystery of creation will remain as is for science.

Chapter Ten

The Direct Experience — Yog Meditation

All the knowledge shared in this discourse is not meant to remain in the intellect. Bapuji always closes his discourses with *yog* — direct, experiential union with the Supreme Soul — so that the understanding entered through the mind can be confirmed through the soul's own experience.

Recall what has been said. The greatest danger facing humanity today is not war, not disease, not climate change — it is *atma vismriti*, the forgetting of the soul's own identity. People have become so deeply identified with the body, the mind, and the intellect that they have entirely lost touch with the consciousness that underlies all three. Every sorrow, every craving, every conflict has this root: the soul has forgotten itself.

The purpose of this meditation is to remember.

Allow the eyes to close. Allow the body to settle.

Release everything that has been held.

Guided Meditation — Bapuji's Words

Close your eyes and become completely relaxed. Remember the essence of what we have spoken today: connect with your own existence, your own identity.

Bring your awareness inward, away from everything in the outer world. The world is *mithya* — not permanent, not eternal. Everything seen will pass, will dissolve, will cease. That which observes the passing is you — the *atma* — and you do not pass.

I am the atma.

I am beyond this body, this mind, this intellect, this ego.

I am pure, radiant, conscious atma.

The body, mind, and intellect are by-products of the soul —

the soul is not a by-product of them.

Bring your awareness to the *bhrukuti* — the point between the eyebrows, where the *tilak* is placed. At this point rests the soul — a point of light, *sukshma* beyond all measure of subtlety, yet radiant with the light of a billion suns. Infinitely small. Infinitely powerful. Full of the power of countless universes.

I, the atma, am radiant — luminous as billions of suns.

Pure white light — param prakash —

param shanti — supreme peace —

radiates from within me and around me.

Let the knowledge of *gyan* — of true understanding — dissolve the darkness of *agyan*, of ignorance. Feel the soul becoming lighter, freer, released from every burden — released from the heaviness of identification with matter, with the body, with its fears and cravings.

I, the atma, am free —

free from kaam (attachment), krodh (anger), lobh (greed),

moh (attachment to illusions), and ahankar (ego).

I, the atma, am in the farishta swaroop — the angelic form —

bathed in supreme light.

Now turn the awareness toward *Parameshwar* — the Supreme Soul, the *param pita*, the father of all souls. The *Brahm* — formless, attributeless, yet the source of all form and all attributes. In the *buddhi* — the faculty of spiritual intelligence — hold the image of the Supreme: the one who is *niraakari* (formless), *akaari* (subtle-form), and *sakaari* (expressed form) — all three present in the one who is beyond all three.

Param prakash — supreme light —

flows from the Supreme Soul to me, the atma.

From the highest to the highest,

from paramdhaam to this soul,

the divine power flows.

In this state of *sakshi bhaav* — witness consciousness — the soul rests in its own nature. Not thinking, not watching itself think. Simply being — the pure consciousness that it has always been, beneath all the layers of the body and the world.

Param shanti.

Supreme peace.

The entire multiverse rests in supreme peace.

From the depths of this Earth to the farthest shore of the multiverse —

param shanti has pervaded everything.

As you gently return from this meditation, carry the remembrance with you: I am the atma. I am not the body. I am not the mind. My real identity is consciousness. Everything else is temporary. The soul is eternal.

Take a long, deep breath. Exhale slowly. Gently open your eyes.

Bapuji's Closing Direction

Walking, sitting, eating, rising — remain in the awareness of the soul. Let the intellect rest in behad ke baap — the unlimited Father — in every moment. This is the state of sthitaprajna — steady

wisdom — and of the karm yogi — one who acts in the world while remaining rooted in the consciousness of the soul.

Key Teachings

Bapuji Insights

On the Source of Science

Science came much later. At the time of creation, there was no science as a subject. What existed was adhyatmik vigyan — spiritual science, the direct knowledge of creation. Science emerged from the power of sankalp. The tool can never surpass the source from which it was created.

On Dark Matter and Dark Energy

What science calls dark energy and dark matter is, in truth, param prakash — supreme light. It is not darkness at all. Because science's instruments cannot detect it, they have called it dark. But the absence of detection is not the absence of existence.

On Consciousness as the Primary Element

If science were to accept that chetana — consciousness — is the fundamental element, their entire model would be reversed. The current sequence is: matter → brain → consciousness. The true sequence is: consciousness → matter → brain. The brain is a receiver, not a generator of consciousness.

On the Human Being

The human being is a fallen deity, not an elevated animal. We descended from divinity into matter, not the other way around. This is why the face of the deity does not resemble an animal's face.

On Death and the Soul

When the body ends, consciousness does not end. The soul begins its sukshma yatra — its subtle journey — moving on to other realms, other experiences. The body may cease, but the soul cannot. The soul is the source, not the by-product.

On the Inner Universe

Science looks outward. Spirituality looks inward. The universe's deepest secrets are not in the outer cosmos — they are within the consciousness that is investigating the cosmos. Truth cannot be proved by external evidence. Truth is always pratyaksh — self-evident, directly experienced.

On the Greatest Danger

The greatest danger today is not war or disease. It is atma vismriti — the forgetting of the soul's own identity. People are entirely identified with the body. Every sorrow has this root. The remedy is atma swaroop — to live in the awareness of who you truly are.

On Akash Tattva

Akash is not empty space. It is a subtle field of vibration, thought, and possibility — never empty,

always full. The karan sharir (causal body) is composed of akash tattva. No physical instrument will ever reach it. Only consciousness, turned inward, can access this level.

Reference

Glossary of Key Terms

All definitions follow the canonical glossary established in Life in Multiverse by Bapuji Dashrathbhai Patel.

Adhyatma / Adhyatmik Vigyan

Spirituality; the science of the soul and consciousness. Adhyatmik vigyan is spiritual science — the original, primary form of knowledge that preceded all material science.

Akash Tattva

The ether element; the subtlest of the five gross elements. Not empty space, but a living field of vibration, consciousness, and possibility. The karan sharir (causal body) is composed of akash tattva.

Atma

The soul; the individual unit of consciousness. The atma is the real self — not the body, not the mind, not the intellect. It is eternal, self-luminous, and indestructible. The atma is primary; the body is its instrument.

Atma Vismriti

Soul-forgetfulness; the condition of being entirely identified with the body and unaware of one's true

nature as consciousness. Bapuji identifies this as the root cause of all human suffering.

Atma Tripti

Soul-contentment; the deep fulfilment that arises from identification with the soul rather than with material things. Unlike sensory satisfaction, atma tripti is lasting.

Behad

Beyond limits; unlimited; transcendental. Used as a prefix to indicate something that operates beyond the boundaries of the ordinary created world.

Behad gyan is unlimited knowledge.

Bhavatit

Beyond emotions; the state in which the soul is no longer moved or destabilised by feelings and experiences. A stage of deep spiritual maturity.

Brahm

The ultimate, formless, infinite cosmic consciousness; the source from which all existence emerges. Brahm had the first sankalp — the intention to become many from one — and from that intention the entire creation unfolded.

Brahmand

The solar system. In Bapuji's cosmological framework, Brahmand refers specifically to our solar system — not the universe at large.

Brahmpuri

The age or realm of Brahma; a cosmic epoch in which existence was composed of a mixture of param tattva and increasingly dense elements.

Buddhi

The spiritual intellect or faculty of higher discrimination. The buddhi is the instrument through which the soul connects with truth and with the Supreme Soul.

Chetan / Chetana

Conscious; consciousness; the quality of awareness that distinguishes the living soul from inert matter. Bapuji's fundamental teaching is that chetana is the primary element of existence — prior to matter, not produced by it.

Dehabhaav

Body-consciousness; the state of identifying the self with the physical body. The source of ego, fear, desire, and sorrow. Transcending dehabhaav is the first step in genuine spiritual practice.

Dhyan / Dhyan Yog

Meditation; the practice of turning consciousness inward to experience the soul's true nature. Dhyan yog is the union of meditation and spiritual knowledge.

Drishti

Vision; the angle of perception through which one sees the world. Bapuji often says: drishti badlo, srishti badal jayegi — change your vision and your world will change.

Farishta Swaroop

The angelic form; the state in which the soul is so purified and luminous that it becomes an expression of divine light in the world.

Gyan

Knowledge; specifically, divine or spiritual knowledge. In Bapuji's usage, gyan always refers to knowledge that liberates — knowledge of the soul, the Supreme Soul, the creation, and the laws of existence.

Had

Limited; bounded; within the ordinary created world. The opposite of behad.

Jad

Inert; matter; that which lacks consciousness. The distinction between jad (inert matter) and chetan (conscious being) is foundational to Bapuji's entire teaching.

Karan Sharir

The causal body; the deepest and subtlest of the soul's three bodies, composed of akash tattva.

Physical medicine cannot reach it. Only deep spiritual practice operates at this level.

Karmateeta

Beyond karma; the state in which the soul is no longer subject to the cycle of karmic action and reaction. A high stage of spiritual realisation.

Maha Brahmand

The galaxy. In Bapuji's cosmological framework, Maha Brahmand refers to the galaxy-level reality, larger than the solar system (Brahmand) and contained within the universe (Param Maha Brahmand).

Multiverse

The totality of all universes and realms of existence. Bapuji's cosmology encompasses not only the physical universe but the entire multiverse of subtle and supreme worlds beyond it.

Mukti

Liberation; the state of being free from the cycle of rebirth and the suffering of the material world.

Param Maha Brahmand

The universe; the largest cosmic structure in Bapuji's framework. Above Maha Brahmand (galaxy). The multiverse encompasses many such universes.

Param Prakash

Supreme light; the ultimate divine radiance that is the true nature of Brahm and of every purified soul. What science calls “dark energy” and “dark matter” is, in Bapuji’s understanding, param prakash — invisible to physical instruments but real and radiant.

Param Shanti

Supreme peace; the deepest possible peace — not the absence of conflict but the positive experience of the soul resting in its own true nature.

Param Tattva

Supreme elements; the subtlest, highest form of the elements — purer than even the five gross elements. In Shivpuri, existence was one hundred per cent param tattva.

Paramdhaam

The Supreme Abode; the highest realm of existence, the home of Brahm and the most elevated souls. The soul’s ultimate destination and original home.

Parmatma

The Supreme Soul; God; the ultimate conscious being from whom all souls and all creation have descended.

Pratyaksh

Self-evident; directly perceived. Truth, in Bapuji's teaching, is always pratyaksh — it cannot be proved by external evidence; it can only be directly experienced.

Sadhana

Disciplined spiritual practice; the consistent inner work through which the soul progresses toward realisation.

Sakshi Bhaav

Witness consciousness; the state of observing all events, thoughts, and feelings from the stable vantage point of the soul, without being caught in them.

Sankalp

Divine thought; conscious intention; the creative thought-power of the soul. The entire creation emerged from Brahm's original sankalp. Science itself, Bapuji says, is the product of human sankalp — and can never surpass the consciousness that produced it.

Shivpuri

The age or realm of Shiva; the original cosmic epoch of pure param tattva — one hundred per cent supreme elements, the highest purity.

Sthitaprajna

Steady wisdom; the state described in the Bhagavad Gita of one whose wisdom is firmly established in the soul. Such a person remains equanimous in pleasure and pain, gain and loss.

Sthool Sharir

The physical body; the grossest of the soul's three bodies. Modern medicine addresses only the sthool sharir.

Sukshma Sharir

The subtle body; the non-physical body that carries emotions, impressions, and the subtle faculties of mind and intellect.

Sukshma Yatra

The subtle journey; the soul's continued existence and travel through subtle realms after the physical body dies. Evidence that consciousness does not end with the brain.

Tapasya

Spiritual austerity; the inner discipline of enduring difficulty, resisting temptation, and persisting in spiritual practice.

Vigyan

Science; knowledge systematically organised through observation and reasoning. Bapuji distinguishes between adhyatmik vigyan (spiritual

science, primary) and modern material science (secondary, derived).

Vishnupuri

The age or realm of Vishnu; a cosmic epoch midway between the purity of Shivrapi and the density of Brahmpuri, composed of fifty per cent param tattva and fifty per cent denser elements.

Yog

Union with the Supreme Soul through meditation and consciousness. Bapuji uses Yog, not Yoga. In his teaching, Yog specifically refers to the soul's direct, conscious connection with Parmatma — not merely physical postures or breathing exercises.

Upcoming Film

PARAMSHANTI: ANTIM PARAM SATYA

A Spiritual Film on Bapuji Dashrathbhai Patel

Presented by Vishwa Parivartak Ishwariya Vidhyalay

Spiritual Movie Arriving in

2026

Soon... THE WORLD WILL KNOW

An upcoming spiritual biographical film based on the divine life, journey, and realisation of the ultimate truth by Bapuji Dashrathbhai Patel. The film traces Bapuji's extraordinary path — from a young soul who questioned God about the suffering of humanity, to the supreme spiritual realisation of Param Shanti — the Antim Param Satya: the final, supreme truth.

COMING SOON....

“Gyan Daan Maha Daan”

Sharing Knowledge is the Highest Charity

— Bapuji Dashrathbhai Patel

MIND BEFORE MATTER

(WHERE SCIENCE FALLS)

For centuries, science has explored the universe outside, measuring matter, energy, space and time. But what if the ultimate reality is not found outside—but within?

THIS BOOK CHALLENGES THE FOUNDATION OF MODERN SCIENCE AND INVITES YOU TO EXPLORE THE SCIENTIFIC TRUTH BEYOND ITS LIMITS.

- ☀ What existed before space, time and the cosmos?
- ⚙ Can consciousness be the source of matter and energy?
- ⌚ Why is science unable to explain dark matter, dark energy and the origin of the universe?
- 🌀 What happens when the entire creation is “wound up”?
- 🧠 What is the true nature of the self beyond the body and mind?
- 👁 How can we protect the soul in times of global upheaval?

Blending spiritual wisdom with logical inquiry, “Mind Before Matter” opens the door to a deeper understanding of existence—where consciousness is not a byproduct of the brain, but the very essence that gives rise to everything.
